

Supplemental Figure. Parameter-specific longitudinal cardiopulmonary trajectories stratified by binary baseline TRVmax (m/s) status. **(A)** GAMM-derived Peak $\dot{V}O_2$ trajectories. **(B)** GAMM-derived $\dot{V}E/\dot{V}CO_2$ slope trajectories. **(C)** Summary of the key status and interaction terms for both models. Baseline threshold groups were defined as TRVmax ≤ 2.8 m/s versus above 2.8 m/s. Longitudinal models were adjusted for age, sex, and BMI.
