

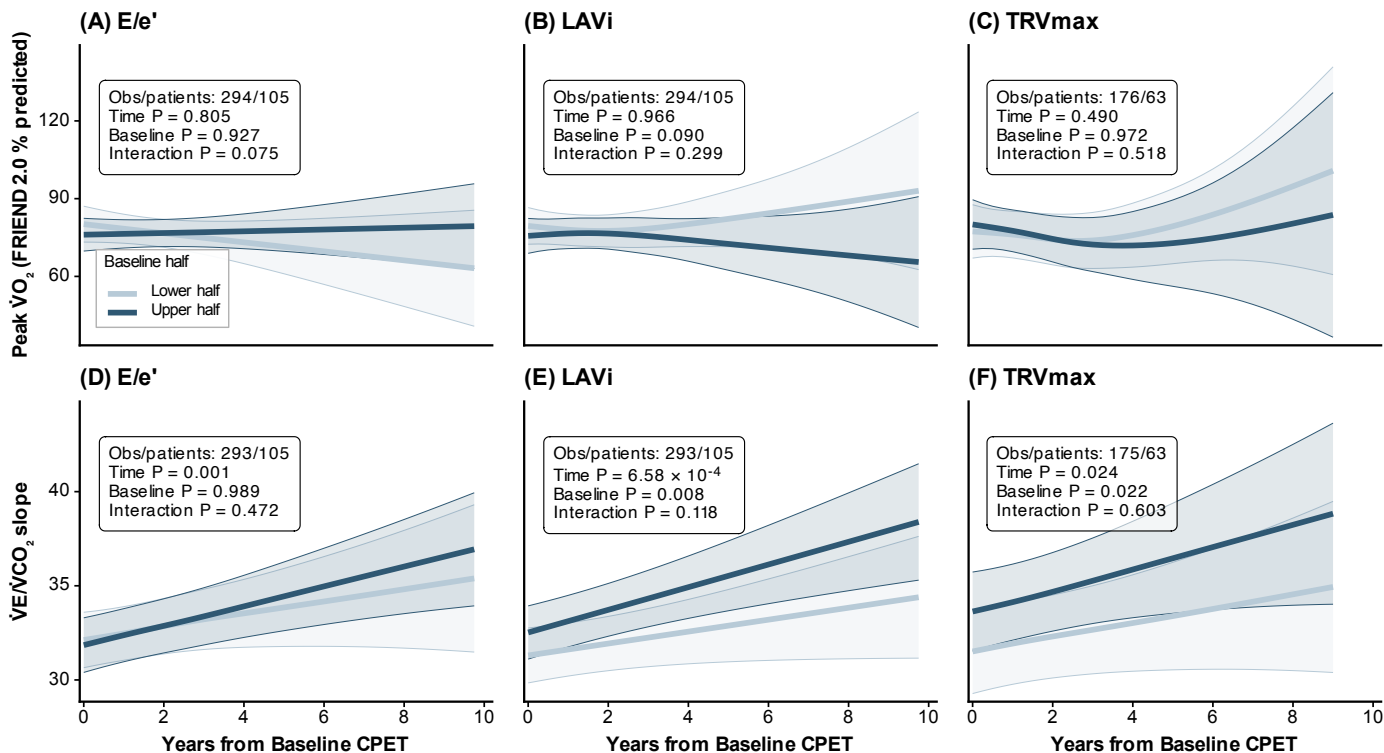

Figure 4. Longitudinal Cardiopulmonary Trajectories Across LV Diastolic Parameters. Age-, sex-, and BMI-adjusted generalized additive mixed models related each continuous baseline parameter to repeated measures over time; lines show predictions at the medians of the lower and upper halves. **(A)** Peak $\dot{V}O_2$ (FRIEND 2.0 % predicted) trajectory across baseline E/e'. **(B)** Peak $\dot{V}O_2$ (FRIEND 2.0 % predicted) trajectory across baseline LAVi. **(C)** Peak $\dot{V}O_2$ (FRIEND 2.0 % predicted) trajectory across baseline TRV_{max}. **(D)** VE/ $\dot{V}CO_2$ slope trajectory across baseline E/e'. **(E)** VE/ $\dot{V}CO_2$ slope trajectory across baseline LAVi. **(F)** VE/ $\dot{V}CO_2$ slope trajectory across baseline TRV_{max}.
