

Supplemental Figure. Observed longitudinal cardiopulmonary trajectories. Raw within-patient trajectories are shown for the 105-patient primary longitudinal subcohort. Patients are divided into lower and upper halves according to the baseline parameter, matching the descriptive grouping used in the fitted-trajectory display. **(A)** Peak $\dot{V}O_2$ by baseline E/e'. **(B)** Peak $\dot{V}O_2$ by baseline LAVi. **(C)** $\dot{V}E/\dot{V}CO_2$ slope by baseline E/e'. **(D)** $\dot{V}E/\dot{V}CO_2$ slope by baseline LAVi. Lines connect observed CPET measurements within each patient; no fitted model or inferential smoother is displayed.
